

Panel Discussion

The Art of Technical Paper Writing

With the recent explosion in the volume of technical literature, the realm of publishing has become increasingly competitive. This panel will discuss how to write good technical papers, so that not only do they get through the tougher review processes but also have the potential of getting cited. The main message will be that a technical paper should be a joy to read, rather than a burden. In addition to presenting their views on what “to do” and what “not to do”, the panelists will also discuss the characteristics of the publications they lead or have led.

Okyay Kaynak (Moderator)
Bogazici University, Turkey

IEEE Fellow
Editor-in-Chief of IEEE Trans. on Industrial Informatics (2005-2006)
and IEEE/ASME Trans. on Mechatronics (2014-2016)

C. L. Philip Chen
South China University of Technology and University of Macau,
China

IEEE Fellow
Editor-in-Chief, Trans. on SMC: Systems (IF: 7.351)

David B. Kaber
University of Florida

Fellow, Institute of Industrial Engineering and Human Factors &
Ergonomics Society
Editor-in-Chief, IEEE Trans. On Human-Machine Systems (IF:3.332)

Fei-Yue Wang
Institute of Automation, Chinese Academy of Sciences

Fellow of IEEE, INCOSE, IFAC, ASME, and AAAS
Editor-in-Chief, IEEE Trans. On Computational Social Systems

Jun Wang
City University of Hong Kong

IEEE Fellow
Editor-in-Chief, IEEE Transactions on Cybernetics (IF: 10.387)
